Computing and Software 734
Formalized Mathematics
Winter 2008

Presentation 1
20 pts.
Due 3 March 2008

Assigned: 4 February 2008
Revised: 4 February 2008

Two 20-minute presentations are required. Each presentation will consist of a talk and a system demonstration. Prepare both presentations with your group partner.

For this first presentation, the talk should be an overview of your chosen theorem proving system. Describe your experiences in obtaining, installing, and learning how to use the system. The system demonstration should include a tour of the system. The talk and system demonstration together must be no more than 20-minutes long.

Divide the presentation between you and your group partner by having one of you give the talk and the other give the system demonstration. (Reverse these roles for the second presentation.)

The first presentations will be given on March 3 and 5. Be prepared to give your first presentation on **March 3**.
