

Computing and Software 734
Formalized Mathematics
Winter 2008

Presentation 2

20 pts.

Due 31 March 2008

Assigned: 4 February 2008

Revised: 4 February 2008

Like the first presentation, prepare this presentation with your group partner.

For this second presentation, the talk should describe your experiences doing the exercises using your chosen theorem proving system. Explain how your system differs from IMPS. The system demonstration should include an example of how the system is used to prove a conjecture. The talk and system demonstration together must be no more than 20-minutes long.

Divide the presentation between you and your group partner by having the person who gave the first system demonstration give the second talk and the person who gave the first talk give the second system demonstration.

The second presentations will be given on March 31 and April 2. Be prepared to give your second presentation on **March 31**.
